ADDENDUM

ATTACH TO AND A PART OF
CUE BALL WIZARD (GAME #734)
INSTRUCTION MANUAL

GAME AS SHIPPED VARIES FROM THE INSTRUCTION MANUAL AS PRINTED.

CORRECTED PAGE 3

HORSESHOE

AWARD EXTRA BALL WHEN BOTH EXTRA BALL LAMPS HAVE BEEN LIT SOLID DURING HORSESHOE EXTRA BALL ROUND (WHEN THE CUE BALL IS OUT OF THE GAME OR WHEN THE CUE BALL IS IN THE GAME AND ADJUSTMENT #46 IS SET TO "VERY HARD").
AWARD EXTRA BALL WHEN EITHER EXTRA BALL LAMP IS LIT SOLID DURING HORSESHOE EXTRA BALL ROUND (WHEN THE CUE BALL IS IN THE GAME AND ADJUSTMENT #46 IS NOT SET TO "VERY HARD").

CORRECTED PAGE 12

ADD HEADINGS FOR STEP #54 AND #55 AS LISTED BELOW TO THE TEST MODE FLOWCHART.

CORRECTED PAGE 13

46 H.SHOE E.B. ROUND TIME VERY EASY EASY MEDIUM HARD VERY HARD

CORRECTED PAGE 14

46) HORSESHOE EXTRA BALL ROUND TIME
VERY EASY = 18 SEC.
EASY = 18 SEC.
MEDIUM = 15 SEC.
HARD = 10 SEC.
VERY HARD = 8 SEC. IF CUE BALL
IS OUT OF GAME
VERY HARD = 15 SEC. IF CUE BALL
IS IN GAME

ADDED TO PAGE 14

54) WAGON WHEEL

*** EASY = LEFT RAMP SHOT FLASHES
LEFT RAMP WAGON WHEEL IF
CORNER POCKET IS LIT FOR
'LITE RAMP'.
HARD = LEFT RAMP HAS NO EFFECT ON
FLASHING RAMP WAGON WHEEL
LAMP.

55) D-O-U-B-L-E

This adjustment determines whether or
not a letter is added to D-O-U-B-L-E
at the end of the game.

*** EASY - ADD A LETTER IF D-O-U-B-L
IS NOT ALREADY SPELLED.
MEDIUM - ADD A LETTER IF D-O-U IS
NOT ALREADY SPELLED.
HARD - DO NOT ADD A LETTER.

SYSTEM 3 OVERVIEW

System 3 contains many new features which improve game play and reliability. Some of these features are as follows:

- 1) New lithium battery provides data retention for a minimum of 5 years under normal operation and virtually eliminates battery leakage. Also a low battery warning is given in the displays when the voltage drops to the critical level.
- 2) New interlocking connector system for improved reliability.
- 3) Use of High Speed CMOS technology for low power consumption and cooler operation.
- 4) Improved solenoid driver reliability due to simplified circuitry and the use of Rugged Power MOSFETS.
- 5) Lamp short protection.
- 6) Switch matrix input protection.
- 7) Easy line voltage adjustment on location.
- 8) Improved bookkeeping functions.
- 9) New 128 x 32 Dot Matrix Display.
- 10) Capability for operators to enter their own messages in the attract mode.
- 11) Use of new SMART SWITCH tm technology which eliminates the use of contact points on switches. Therefore the need for cleaning dirty switches is eliminated.
- 12) Addition of a Tournament Mode switch which allows quick and easy way to replace current adjustment settings with special settings. This switch also provides an easy way to set the game for free play.

This equipment has been found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

I. INSTALLATION

A. SET-UP

1. Bolt the legs to the cabinet.
2. Lift lightbox into an upright position. Be sure none of the cables are crimped in between the lightbox and cabinet.
3. Engage the snap in the rear of the lightbox to the cabinet.
4. To remove the lightbox backglass and gain servicing access to the electronics panel and the insert lamp assembly, proceed as follows:

UNLOCK THE LIGHTBOX BY TURNING THE KEY A QUARTER TURN CLOCKWISE.

LIFT UP THE BACKGLASS RETAINING BOTTOM TRIM ABOUT 3/4" TO CLEAR THE "H" RETAINING CHANNEL ON THE TOP EDGE OF THE DISPLAY/SPEAKER PANEL, PIVOT OUT TOWARDS YOU AND SLIDE THE BACKGLASS DOWN AND OUT, CAREFULLY SET ASIDE.

REMOVE THE "H" RETAINING CHANNEL, SLIDE THE PLEXIGLASS INSERT UP AND OUT, SLIDE UP AND REMOVE THE DISPLAY/SPEAKER PANEL AND LAY FACE DOWN ON THE CABINET.

UNLOOSEN THE TWO WING NUTS ON THE LEFT SIDE AND PUSH THE LOCK SLIDE UPWARDS, THIS ALLOWS THE LIGHTBOX LAMP INSERT TO SWING OUT AND FOR GAINING ACCESS TO THE ELECTRONICS PANEL.

5. Secure the lightbox to the cabinet with the bolts and washers provided.

TO REPLACE THE BACKGLASS, INSERT THE DISPLAY/SPEAKER PANEL, ENSURE THAT THE METAL TABS ON THE PANEL MATE INTO THE WOOD RETAINERS, SLIDE IN THE PLEXIGLASS PANEL AND INSERT THE "H" RETAINING CHANNEL.

SLIDE THE BACKGLASS UP INTO THE LIGHTBOX, PIVOT INWARDS AND SLIDE DOWN INTO THE "H" CHANNEL, TURN THE KEY A QUARTER TURN COUNTER-CLOCKWISE TO LOCK THE LIGHTBOX.

6. Open the cabinet door and loosen the front moulding locking arm.
7. Remove the front moulding from the cabinet.
8. Slide the playfield glass toward you and remove it, carefully set aside.
9. Raise the playboard and pivot it upwards and back towards the lightbox,

hold in place and insert the prop stick into the countersunk hole on the underside of the playfield.

CAUTION!

Use prop stick when servicing under the playfield.

10. Unravel and straighten out the power line cord located at the rear of the cabinet.
11. Proceed to "B. CHECK-OUT".

B. CHECK-OUT

1. Check that all cables are clear of moving parts.
2. Check for any loose wires.
3. Check switches for loose solder or other foreign matter.
4. Be certain all fuses are firmly seated.
5. Check transformer for any foreign matter across terminals.
6. Be sure that the Transformer Panel power input connector A12J5, corresponds to the supply voltage.
7. Check the setting of the normally open tilt switch on the underside of the playfield. One blade should be free-floating with a weight on the end.
8. The plumb-bob tilt can be adjusted by loosening the clip and raising the plumb-bob to increase its sensitivity, or lowering it to decrease its sensitivity.
9. Lower the playfield into the cabinet. Using the leg adjusters, level the playfield and set the pitch. Recommended pitch is 6°.
10. Plug the line-cord into a properly grounded 3-wire receptacle ONLY!
11. Refer to Section III to make all necessary game adjustments.
12. Re-install the playfield glass, front moulding and lock the cabinet door.
13. CAUTION! If this game has been subjected to extreme cold, allow to warm up to room temperature.

I. INSTALLATION

C. COIN METER (OPTIONAL)

A +12vdc mechanical coin meter may be installed by the operator to count total coins accepted by the machine. The coin meter leads should be soldered to the lugs on the terminal strip mounted inside the front door on the right side (see Figure 1). If the coin meter is polarized, the positive lead (red) should be attached to the lug that has the cathode (banded) side of the diode attached to it otherwise the leads may be attached in any order. The COIN METER adjustment must be set to on and the following four adjustments should be set to the number of pulses (counts) required for each coin denomination used.

NOTE: Make sure that the GAME MODE adjustment is not set to either REPLAY + TICKETS or TICKETS ONLY (see Game Adjustments section).

D. TICKET DISPENSER (OPTIONAL)

This machine is equipped to easily interface to the Deltronic Labs #DL-4-S-S ticket dispenser with the outside mounting option. To install the dispenser, first locate the five partially drilled holes on the inside of the cabinet on the right side (see Figure 1). The four "A" holes are for mounting the cabinet with #10 X 1-1/4" carriage bolts. The "B" hole is for

cable access to the unit. Drill the "A" holes out from the inside of the cabinet using a 13/64" drill bit. Drill the "B" hole out from the inside of the cabinet using a 1" drill bit. The GAME MODE adjustment is used to set whether to dispense a number of tickets along with each replay awarded (REPLAY + TICKETS) or to dispense a number of tickets in place of each replay awarded (TICKETS ONLY). The TICKETS TO AWARD adjustment is used to set the number of tickets to dispense for each replay awarded (see Game Adjustments section).

NOTE: Make sure that the COIN METER adjustment is set to off when using a ticket dispenser.

E. BILL ACCEPTOR (OPTIONAL)

A bill acceptor can be easily interfaced electrically to this machine. The two unused 522 (green-red-red) and 622 (blue-red-red) center chute switch wires should be attached to the switch output of the bill acceptor (see Cabinet/Lightbox Schematic Diagram). The line voltage plug located inside the cabinet on the right side can be used for supplying power to the unit. The CENTER CHUTE SETTING adjustment can then be used to set the number of credits to be issued for each bill accepted.

FIGURE 1.

II. GAME PLAY AND SCORING

HOW TO PLAY

POP BUMPERS

SCORE 3000.

CHANGE WAGON WHEEL ROUND WHEN CHANGE LAMP IS FLASHING.

WHEN NOT IN MULTIBALL, NOT IN A ROUND, AND NOT IN 9-BALL PLAY, CHANGE BANK SHOT HOLE LAMPS FROM FLASHING TO LIT SOLID FOR A TIME PERIOD.

TOP CENTER SPOT TARGETS (SWEET SPOT)

SCORE 1,000,000 OR 50,000,000 WHEN FLASHING.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

UPPER SPOT TARGETS

SCORE 20,000 OR 5,000,000 WHEN FLASHING.

AWARD SPECIAL WHEN FLASHING.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

BANK SHOT HOLES

SCORE 20,000.

COLLECT AND CONTINUE COUNTDOWN BONUS WHEN BANK SHOT LAMP IS FAST-FLASHING DURING COMBO SHOTS ROUND.

AWARD CLEAN BANK SHOT AWARD AND BANK SHOT (MYSTERY) AWARD WHEN BANK SHOT LAMP IS FLASHING OR JUST BANK SHOT (MYSTERY) AWARD WHEN BANK SHOT LAMP IS LIT SOLID.

LEFT SIDE SPOT TARGET

SCORE 20,000.

SCORE 5,000,000 WHEN FLASHING.

SCORE 10,000,000 WHEN FLASHING.

AWARD HURRY-UP SPECIAL WHEN FLASHING.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

DROP TARGETS

SCORE 5,000 OR 500,000 WHEN LIT.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

ADD 1,000,000 TO JACKPOT WHEN ADD JACKPOT LAMP IS FLASHING.

DURING 8-BALL PLAY, WHEN FLASHING DROP TARGET BANK IS COMPLETED, FLASH SIDE POCKET 8-BALL LAMP.

DURING 9-BALL PLAY, ADVANCE TO THE NEXT TARGET (BALL) WHEN FLASHING TARGET (BALL) HAS BEEN KNOCKED DOWN.

FOR 9-BALL TARGET, SCORE 1/2 BILLION WHEN FLASHING IN 9-BALL PLAY. RE-START 8-BALL PLAY IF 1/2 BILLION IS COLLECTED.

P-O-O-L ROLLOVERS

SCORE 20,000.

COMPLETING P-O-O-L LIGHTS RAMP FOR VIDEO MODE PLAY AND FLASHES SWEET SPOT LAMPS FOR 50,000,000.

II. GAME PLAY AND SCORING

KICKING RUBBERS

SCORE 90.

THE TOP SPECIAL LAMPS TOGGLE WHEN THE MULTIPLIER IS AT 7X.

THE SPELL WIZARD LAMP IS TOGGLED IF THE CUE BALL IS OUT OF THE GAME AND THE CUE BALL GAME ADJUSTMENT IS SET TO 'OUT'.

CORNER POCKET HOLE

SCORE 20,000.

COLLECT COUNTDOWN BONUS AND END COMBO SHOTS ROUND WHEN CORNER POCKET HOLE LAMP IS FAST-FLASHING DURING COMBO SHOTS ROUND.

ADVANCE MULTIPLIER WHEN FLASHING. WHEN MULTIPLIER REACHES 7X, THEN THE TWO TOP SPECIAL LAMPS ARE ACTIVATED.

ADD LETTER TO D-O-U-B-L-E WHEN FAST-FLASHING DURING SPELL DOUBLE ROUND.

LIGHT RAMP FOR ENTERING WAGON WHEEL ROUND WHEN 'LITE RAMP' LAMP IS LIT.

LOWER RIGHT SIDE TARGET

SCORE 20,000.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

CHANGE WAGON WHEEL ROUND WHEN CHANGE LAMP IS FLASHING.

AWARD EXTRA BALL WHEN FLASHING.

HORSESHOE

See yellow sheet

SCORE 100,000.

SCORE 2,000,000 AND ADVANCE SCORING LAMPS WHEN 2M LAMPS ARE LIT.

SCORE AS INDICATED WHEN LAMP IS FLASHING AND HORSESHOE IS HIT FROM THAT SIDE. ADVANCE FLASHING SCORE LAMP AND REVERSE SIDES.

AWARD EXTRA BALL WHEN BOTH EXTRA BALL

LAMPS HAVE BEEN LIT SOLID DURING HORSESHOE EXTRA BALL ROUND.

ELEVATED GREEN SIDE POCKET SPOT TARGETS

THESE TARGETS ARE ONLY ACTIVE IF THE CUE BALL IS IN THE GAME AND THE CUE BALL GAME ADJUSTMENT IS SET TO 'IN'.

SCORE 5,000.

ADVANCE SCRATCH FEATURE IF NO OTHER FEATURE LAMPS ARE ACTIVE.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

IF 8-BALL IS FLASHING IN 8-BALL PLAY, FLASH RAMP FOR MULTIBALL, ADVANCE RACKS, RESET SOLIDS OR STRIPES (DROP TARGETS) FOR CONTINUED 8-BALL PLAY.

IF 8-BALL IS FLASHING IN 9-BALL PLAY, FLASH 9-BALL DROP TARGET FOR 1/2 BILLION.

ADVANCE RACKS AND SCORE SIDE POCKET SCORE VALUE (10,000,000 IF CUE BALL ADJUSTMENT IS SET TO 'IN' AND 5,000,000 IF CUE BALL ADJUSTMENT IS SET TO 'OUT') WHEN SIDE POCKET LAMP IS FAST-FLASHING IN SIDE POCKET ROUND.

LAUNCH 8-BALL AND SCORE YELLOW, BLUE OR RED JACKPOT DURING MULTIBALL.

SIDE POCKET SPOT TARGETS

THESE TARGETS PERFORM THE SAME FUNCTION AS THE ELEVATED SIDE POCKET SPOT TARGETS IF THE CUE BALL IS OUT OF THE GAME AND THE CUE BALL GAME ADJUSTMENT IS SET TO 'OUT'.

SCORE 50,000.

SCORE 10,000,000 WHEN 10,000,000 IS FLASHING.

SCORE 30,000,000 WHEN 'NO WAY' LAMP IS FAST-FLASHING.

ADD LETTER TO W-I-Z-A-R-D WHEN LIT.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

II. GAME PLAY AND SCORING

SIDE SPOT TARGETS (CENTER OF PLAYFIELD)

SCORE 3,000.

ADD TO POOLBALL MANIA BONUS DURING POOLBALL MANIA.

RAMP

SCORE 500,000.

ENTER VIDEO MODE WHEN LIT.

ENTER MULTIBALL WHEN FLASHING.

START CURRENT WAGON WHEEL ROUND WHEN FLASHING.

ADD LETTER TO D-O-U-B-L-E WHEN FAST-FLASHING DURING SPELL DOUBLE ROUND.

COLLECT AND CONTINUE COUNTDOWN BONUS WHEN RAMP LAMPS ARE STROBING DURING COMBO SHOTS ROUND.

RE-ACTIVATE AND RE-INITIALIZE YELLOW, BLUE, AND RED JACKPOTS DURING MULTIBALL WHEN SUPER JACKPOT LAMP IS FLASHING. SCORE 100,000,000.

BEGIN 9-BALL PLAY WHEN 9-BALL PLAY LAMP IS FAST-FLASHING.

YELLOW SPOT TARGETS (UPPER PLATFORM)

SCORE YELLOW JACKPOT DURING MULTIBALL.

BLUE SPOT TARGETS (UPPER PLATFORM)

SCORE 5,000,000 IF HIT BY 8-BALL ON OPENING PLUNGER SKILL SHOT.

FLASH LEFT HORSESHOE 10M LAMP IF WAGON WHEEL LAMP IS NOT FLASHING IF HIT BY 8-BALL ON OPENING PLUNGER SKILL SHOT.

SCORE BLUE JACKPOT DURING MULTIBALL.

RED SPOT TARGETS (UPPER PLATFORM)

SCORE RED JACKPOT DURING MULTIBALL.

OUTHOLE

IF THE CUE BALL IS IN THE GAME AND THE GAME IS SET TO 3 BALLS PER GAME, THEN THE STATE OF THE 8-BALL LAMP WILL BE REMEMBERED FROM BALL TO BALL FOR EACH PLAYER. THIS STATE WILL BE RESTORED UPON THE PLAYER'S NEXT BALL.

THE STATE OF THE VIDEO MODE LAMP WILL BE REMEMBERED FROM BALL TO BALL FOR EACH PLAYER. THIS STATE WILL BE RESTORED UPON THE PLAYER'S NEXT BALL.

COLLECT POOLBALL MANIA BONUS, IF ANY.

COLLECT 500,000 TIMES RACKS TIMES MULTIPLIER BONUS.

ADDITIONAL FEATURES

SCRATCH SHOT

THE PLAYER CAN ACCUMULATE SCRATCHES BY HITTING THE SIDE POCKET WHEN NO OTHER SIDE POCKET FEATURE IS ACTIVE. WHEN THE CUE BALL IS IN THE GAME, THE PLAYER SCORES 10,000,000 WHEN HE REACHES 3 SCRATCH SHOTS, 30,000,000 WHEN HE REACHES 8 SCRATCH SHOTS, 60,000,000 WHEN HE REACHES 15 SCRATCH SHOTS, AND 90,000,000 WHEN HE REACHES 30 SCRATCH SHOTS. WHEN THE CUE BALL IS OUT OF THE GAME, THE PLAYER SCORES 10,000,000 WHEN HE REACHES 6 SCRATCH SHOTS, 30,000,000 WHEN HE REACHES 16 SCRATCH SHOTS, 60,000,000 WHEN HE REACHES 30 SCRATCH SHOTS, AND 90,000,000 WHEN HE REACHES 60 SCRATCH SHOTS.

8-BALL PLAY

THE PLAYER MUST COMPLETE THE LEFT DROP TARGETS (SOLIDS) OR THE RIGHT DROP TARGETS (STRIPES) IN ORDER TO LIGHT THE 8-BALL. FLASHING LAMPS SHOW THE PLAYER WHETHER SOLIDS OR STRIPES ARE ACTIVE. HITTING THE 8-BALL TARGET WHEN IT IS FLASHING, ADVANCES THE RACKS AND RE-STARTS THE 8-BALL SEQUENCE.

POOLBALL MANIA

WHEN ALL WAGON WHEEL ROUNDS HAVE BEEN COMPLETED, A PLAYER IS THEN GIVEN THE OPPORTUNITY TO ENTER THE POOLBALL MANIA ROUND. POOLBALL MANIA IS 3 BALL

II. GAME PLAY AND SCORING

MULTIBALL AND THE ROUND LASTS AS LONG AS THE PLAYER KEEPS 2 OR 3 BALLS ON THE PLAYFIELD. HITTING VARIOUS TARGETS INCREASES THE POOLBALL MANIA BONUS, WHICH IS COLLECTED AT THE END OF THE BALL. WHEN ONLY 1 BALL IS LEFT ON THE PLAYFIELD, THE 9-BALL PLAY LAMP FLASHES FOR 99 SECONDS. IF THE PLAYER SHOOTS THE RAMP WHEN THIS LAMP IS FLASHING, HE THEN ENTERS 9-BALL PLAY.

ONE NOTE: IF PLAYER DOES NOT SHOOT THE SECOND BALL UP AND OVER THE RAMP SO THAT THE BALL COMES INTO PLAY DOWN THE RIGHT RAMP, THEN IT WILL BE JUST 2 BALL MULTIBALL, NOT 3 BALL MULTIBALL.

9-BALL PLAY

THE OBJECT OF 9-BALL IS TO SEQUENTIALLY 'SINK' (HIT THE CORRESPONDING DROP TARGET) BALLS NUMBERED 1 THROUGH 9. COMPLETING BALLS 1 THROUGH 7 SEQUENTIALLY FLASHES THE SIDE POCKET 8-BALL. SINKING THE 8-BALL IN THE SIDE POCKET FLASHES THE 9-BALL AND SINKING THE 9-BALL WILL THEN SCORE 1/2 BILLION POINTS AND RE-START THE 8-BALL PLAY SEQUENCE.

RACK ADVANCES

DEPENDING ON THE RACK ADVANCE EXTRA BALL ADJUSTMENT SETTING, ADVANCING THE RACKS CAN FLASH THE LOWER RIGHT SIDE TARGET EXTRA BALL FOR A TIME PERIOD.

EACH RACK ADVANCE AFTER 7 RACKS HAVE BEEN COMPLETED SCORES 500,000.

MULTIBALL AND JACKPOT COLLECT

COMPLETING SOLIDS OR STRIPES AND THEN SINKING THE 8-BALL FLASHES THE RAMP MULTIBALL LAMP. IF THE PLAYER THEN SHOOTS THE RAMP, HE ENTERS 2 BALL MULTIBALL PLAY. HITTING THE CENTER SIDE POCKET TARGETS LAUNCHES THE 8-BALL AND COLLECTS THE YELLOW, BLUE OR RED JACKPOTS. HITTING DROP TARGETS ADDS TO THE JACKPOTS. WHEN ALL 3 JACKPOTS HAVE BEEN COLLECTED, THE RAMP SUPER JACKPOT LAMP FLASHES. SHOOTING THE RAMP THEN SCORES 100,000,000 SUPER JACKPOT AND RE-INITIALIZES ALL THREE JACKPOTS.

D-O-U-B-L-E FEATURE

COMPLETING D-O-U-B-L-E AWARDS DOUBLE SCORE, DOUBLE AWARDS, AND DOUBLE JACKPOTS FOR THE REST OF THE BALL. LETTERS COMPLETED IN D-O-U-B-L-E ARE REMEMBERED FROM PLAYER TO PLAYER AND FROM GAME TO GAME, EVEN IF POWER IS TURNED OFF.

A LETTER IS ADDED TO D-O-U-B-L-E WHEN THE GAME IS OVER IF D-O-U-B-L IS NOT COMPLETE.

W-I-Z-A-R-D FEATURE

COMPLETING W-I-Z-A-R-D FLASHES THE THREE 5M LAMPS TO SCORE 5,000,000 WHEN HIT. THE CENTER 10M LAMP IS ALSO FLASHED FOR SCORING 10,000,000. THIS LAMP TIMES OUT IF THE CUE-BALL IS NOT IN THE GAME AND THE CUE BALL GAME ADJUSTMENT IS SET TO 'OUT'. LETTERS COMPLETED IN W-I-Z-A-R-D ARE REMEMBERED FOR EACH PLAYER FROM BALL TO BALL, BUT NOT FROM GAME TO GAME.

CLEAN BANK SHOT

A PLAYER RECEIVES HIGHER SCORES/AWARDS EACH TIME HE COLLECTS THE CLEAN BANK SHOT BY SHOOTING THE TOP BANK SHOT HOLES WHEN THE BANK SHOT LAMPS ARE FLASHING. THE AWARDS ARE 1,000,000 - 2,000,000 - 5,000,000 - EXTRA BALL - 7,000,000 - 10,000,000 - 15,000,000 - 20,000,000 - 20,000,000. A PLAYER CAN ONLY BE AWARDED ONE EXTRA BALL PER GAME FROM THE CLEAN BANK SHOT FEATURE. HITTING A POP BUMPER DISABLES THE CLEAN BANK SHOT FEATURE FOR A TIME PERIOD.

HORSESHOE

WHEN THE 2M LAMPS ARE LIT, THEN SHOOTING THE HORSESHOE FLASHES A 5M LAMP AND SHOOTING THAT SIDE OF THE HORSESHOE SCORES 5,000,000 AND FLASHES THE OPPOSITE 10M LAMP. SHOOTING THAT SIDE OF THE HORSESHOE SCORES 10,000,000 AND FLASHES THE OPPOSITE 20,000,000 LAMP. SHOOTING THAT SIDE OF THE HORSESHOE SCORES 20,000,000 AND FLASHES THE OPPOSITE 20,000,000 LAMP. THIS CONTINUES UNTIL A TIME PERIOD HAS EXPIRED (SEE HORSESHOE 20M TIMEOUT ADJUSTMENT).

II. GAME PLAY AND SCORING

HURRY-UP FEATURES

A HURRY-UP FEATURE IS A FEATURE THAT STAYS ACTIVE FOR A LIMITED AMOUNT OF TIME AND IS THEN DISABLED. THE HURRY-UP FEATURES ARE EXTRA BALL, SPECIAL, 10,000,000, 9-BALL PLAY, AND 1/2 BILLION.

BANK SHOT (MYSTERY)

A PLAYER RECEIVES A MYSTERY AWARD WHEN HE LANDS IN A TOP BANK SHOT HOLE. THE BANK SHOT (MYSTERY) AWARD COULD BE ANY OF THE FOLLOWING:

COMPLETE ALL SOLIDS or STRIPES.

SCORE 1,000,000.

START HURRY-UP 9-BALL PLAY.

FLASH HURRY-UP 10,000,000 LAMP.

AWARD EXTRA BALL, SPECIAL, CURRENT WAGON WHEEL ROUND, AND MULTIBALL.

ADVANCE MULTIPLIER.

ADVANCE RACKS.

ADVANCE LETTER IN D-O-U-B-L-E.

ADVANCE LETTER IN W-I-Z-A-R-D.

AWARD D-O-U-B-L-E.

AWARD W-I-Z-A-R-D.

ENABLE HURRY-UP EXTRA BALL.

ENABLE HURRY-UP SPECIAL.

AWARD EXTRA BALL.

START VIDEO MODE.

LIGHT RAMP ENTER ROUND LAMP.

ENABLE HURRY-UP SPECIAL, EXTRA BALL, AND 10,000,000.

ENTER CURRENT WAGON WHEEL ROUND.

SCORE 5,000,000.

SCORE 10,000,000.

ENABLE HURRY-UP 1/2 BILLION.

VIDEO MODE

THE PLAYER TRIES TO CATCH A FALLING POOL BALL BY MOVING THE POCKET ON THE DISPLAY LEFT OR RIGHT WITH THE LEFT AND RIGHT FLIPPERS. IF HE IS SUCCESSFUL, THEN HE SCORES POINTS ACCORDING TO THE GAME ADJUSTMENT #52 SETTING.

MULTIPLIER ADVANCES

ADVANCING THE MULTIPLIER TO 7X ENABLES THE TOP SPOT TARGET SPECIALS.

OPENING PLUNGER SKILL SHOT

UPON ANY NEW BALL IN PLAY WHEN NOT IN MULTIBALL OR POOLBALL MANIA, THE PLAYER SHOULD TRY TO TIME HIS SHOT SO THAT THE SHOT BALL PASSES THROUGH THE RIGHT RAMP OPTO SWITCH WHEN THE 8-BALL IS IN POSITION TO HIT THE CENTER BLUE TARGETS ON THE UPPER 8-BALL PLATFORM. WHEN THE BALL PASSES THROUGH THE RIGHT RAMP OPTO SWITCH, THE 8-BALL IS FIRED AT THE PLATFORM SPOT TARGETS. HITTING THE YELLOW OR RED TARGETS AWARDS NOTHING. HITTING THE BLUE TARGETS SCORES 5,000,000 AND STARTS THE HORSESHOE SCORING AT 10,000,000 IF THE ENTER ROUND LAMP IS NOT FLASHING.

LANE CHANGE

HITTING THE LEFT OR RIGHT FLIPPER ROTATES ALL LIT P-O-O-L LAMPS.

ROUNDS

COMPLETING ALL WAGON WHEEL ROUNDS ALLOWS THE PLAYER TO ENTER POOLBALL MANIA (3 BALL MULTIBALL).

ROWDY RAMP ROUND

CONSECUTIVE SHOTS UP THE RAMP INCREASE THE SCORE AWARDED. THE SCORES RANGE FROM 2,000,000 - 5,000,000 - 10,000,000 - 20,000,000 - 40,000,000 - 40,000,000.

II. GAME PLAY AND SCORING

HORSESHOE EXTRA BALL ROUND

IF CUE-BALL IS OUT, THEN COMPLETING THE HORSESHOE BY SHOOTING BOTH SIDES AWARDS AN EXTRA BALL.

IF CUE-BALL IS IN, THEN COMPLETING EITHER SIDE OF THE HORSESHOE AWARDS AN EXTRA BALL.

SPELL DOUBLE ROUND

PLAYER ADDS A LETTER TO D-O-U-B-L-E IF HE HITS THE CORNER POCKET WHEN ENABLED OR THE RAMP WHEN ENABLED. THE CORNER POCKET IS ENABLED FIRST, THEN THE RAMP, ONCE THE CORNER POCKET HAS BEEN HIT.

'NO WAY' ROUND

IF THE CUE-BALL IS IN, THEN EACH HIT OF THE ELEVATED TARGETS SCORES 30,000,000.

IF THE CUE-BALL IS OUT, THEN THE PLAYER MUST SHOOT THE HORSESHOE TO SCORE THE INDICATED VALUE AND ADVANCE THE SCORE LAMPS. COLLECTING THE 20,000,000 SCORE THEN FLASHES THE 'NO WAY' LAMP AND THE PLAYER MUST HIT THE CENTER SIDE POCKET SPOT TARGETS TO SCORE 30,000,000.

COMBO SHOTS ROUND

THIS ROUND FEATURES THREE SEPARATE COUNTDOWN BONUSES THAT THE PLAYER TRIES TO COLLECT. FIRST, THE RAMP IS ENABLED. IF THE PLAYER SHOOT THE RAMP, THEN THE RAMP COUNTDOWN BONUS IS COLLECTED AND THE TOP BANK SHOT HOLES ARE ENABLED. SHOOTING EITHER BANK SHOT HOLE COLLECTS ITS COUNTDOWN BONUS AND ENABLES THE CORNER POCKET. SHOOTING THE CORNER POCKET COLLECTS ITS COUNTDOWN BONUS AND THE ROUND ENDS.

SIDE POCKET ROUND

SCORE EITHER 5,000,000 OR 10,000,000 WHEN THE SIDE POCKET TARGETS ARE HIT AND ADVANCE RACKS.

III. TEST MODE

There are several functions accessible to the operator while in the test mode. These functions are Self-Test, Bookkeeping, Game Adjustments, and Burn-In. Each of these functions will be explained in detail later in this section. To enter the test mode, the game must be in the attract mode (game over). Then depress the Test button located just inside the front door of the game. The operator will be given a choice as to which function he wants to access. Pressing the appropriate button will select that function.

NOTE: The Test button may be held in to fast forward through the steps of a particular function.

To exit the test mode or change functions the Slam switch (front door) must be activated or the power must be turned off.

I. SELF-TEST

This function will allow the operator to test all the hardware related devices in the game. Each test is described below.

A. MEMORY TEST

This function tests all memory devices on the Control Board (A1). If all the devices pass the test an "OK" will be displayed. If a failure occurs, a description of the faulty component will be displayed. Then after a short period of time the Game Prom check sum will be displayed. The Credit button can be used to restart this test.

B. LAMP CHECK

This function will flash all the controlled lamps and flasher lamps continuously. This will allow the operator to easily check for and replace any burned out light bulbs.

C. LAMP MATRIX TEST

This test will allow the operator to single step through and check the operation of each lamp in the game. The left flipper button will decrement the active lamp number by one while the right flipper button will increment the active lamp number by one. The strobe number and the return number are combined to form

the lamp number (strobe,return) which is shown in the display along with a description of the lamp. The Credit button can be used to restart this test. Only one lamp at a time should flash during this test.

D. RELAY AND SOLENOID TEST

This test will allow the operator to single step through and check the operation of each relay and solenoid driver in the game. The left and right flipper buttons are used to change the active driver number. The selected driver description and number will appear in the display. The Credit button is then used to activate the driver for a short time period. Solenoid #31 ("Q" relay) is always on during this test so as to provide power to devices such as the pop bumpers and kicking rubbers (see Playboard Schematic Diagram).

E. SWITCH MATRIX TEST

The first part of this test will report any inactive switches. If a switch has not been actuated in the course of the last 15 games the switch name and number will be displayed.

The second part of the test will allow the operator to test the operation of all the switches used in the game. If no switches are closed when this test is started, the message "ALL SWITCHES OPEN" will be displayed. If any switches are closed either before or after this test is started, the closed switch(s) name and number will be displayed. The strobe number and the return number are combined to form the switch number (strobe,return). The Credit button can be used to restart this test.

F. DISPLAY TEST

This test allows the operator to check the operation of the 128 x 32 dot matrix display. The right flipper button is used to advance this test. The first three steps check the different levels of display intensity. Each block that appears on the display should be of lesser intensity than the one to the left of it. When all four blocks appear in the display at the same time, it is normal to see them slightly flicker. During the next four steps a diagonal pattern is stepped from left to right

III. TEST MODE

in the display. While in this part of the test every fourth pixel only in each row of dots should be lit. During the next eight steps another diagonal pattern is stepped from left to right in the display. While in this part of the test every eighth pixel only in each row of dots should be lit. The Credit button can be used to restart this test.

H. SOUND TEST

This test allows the operator to test the interface lines from the Control Board (A1) to the Sound Board (A6). Every time the right flipper button is pressed, a different tone should be heard from the Sound Board. During each tone, the sound line connection which is being tested will be shown in the display. After the tone stops the sound line which is being tested will still be kept at a low level ($<.8v$) until the right flipper button is pressed again or the Credit button is used to restart the test.

I. FRONT DOOR TEST

This test allows the operator to check the operation of the coin chutes used in the game. Utilizing this function will not affect any bookkeeping values. Each coin chute closure is categorized and shown in the display. The Credit button can be used to restart this test.

II. BOOKKEEPING

The Test button is used to step through bookkeeping. The display will contain a description of each step, the step number, and two different bookkeeping values. The value in the leftmost column represents long term bookkeeping. The value in the rightmost column (in brackets) represents short term bookkeeping. These two values are provided so that the operator may compare recent performance with long term performance and then make any necessary game adjustments.

NOTE: The left column of the first four steps (coin chute counts) will not be displayed unless the credit button is pressed during that active step number.

The left flipper button will allow the operator to reset all of the left (long term) and right (short term) bookkeeping values. The right flipper button will allow the operator to reset all of the right (short term) bookkeeping values only. If the R.BOOK AUTO-RESET adjustment is on, the right (short term) bookkeeping will automatically be reset after every 2000 plays (see Game Adjustments). Therefore, the operator does not need to reset the short term bookkeeping himself unless he prefers to follow his own procedure. Also, this feature will aid in adjusting the game payout percentage to the caliber of players in different locations. If there happens to be a major error in a long term bookkeeping value the word ERROR will appear to the right of that bookkeeping value. To correct this error the long term bookkeeping must be reset. A description of each bookkeeping step is given in the test mode flowchart.

III. GAME ADJUSTMENTS

This function allows the operator to make any adjustments to his game as necessary.

A. FACTORY SETTINGS

Upon entering the game adjustment section of bookkeeping, the operator is given a choice to load all factory settings or to single step through the game adjustments and adjust each section individually. If he chooses to enter the factory settings by depressing the Credit button, he will also be given a choice of what language to load. By using the right flipper button he may choose the appropriate language and then depress the Credit button again to enter the settings. After the settings are loaded the display should show the message "FACTORY SETTINGS LOADED" for a short time and then proceed to game adjustment step 1. At any time during the previous steps the operator may either exit the test mode or depress the Test button to proceed immediately to game adjustment step 1.

III. TEST MODE

WARNING

Loading the factory settings will affect all previous game adjustment settings. Therefore be careful when selecting this feature.

B. GAME ADJUSTMENT STEPS

Each time the Test button is pressed a description of the next step appears in the display along with the step number and the current status of that step. Unless otherwise specified, the left and right flipper buttons are used to change the possible selections in each step.

- 1) SCORE REPLAY LEVEL 1
- 2) SCORE REPLAY LEVEL 2
- 3) SCORE REPLAY LEVEL 3

Each Score Replay Level may be set by using the left flipper button to decrement the score and the right flipper button to increment the score. The Credit button can be used to load the factory setting for each individual level if desired. If the Auto-Percentaging adjustment is on, Replay Levels 2 & 3 can only be set to on or off. If Replay Level 2 is on, the score level will be set to two times Replay Level 1. If Replay Level 3 is on, the score level will be set to three times Replay Level 1. This allows the operator several combinations of levels in the Auto-Percentaging mode (i.e. 1, 1 & 2, 1 & 3, or 1 & 2 & 3).

- 4) HIGH GAME TO DATE 1
- 5) HIGH GAME TO DATE 2
- 6) HIGH GAME TO DATE 3
- 7) HIGH GAME TO DATE 4
- 8) HIGH GAME TO DATE 5

Each High Game To Date may be set by using the left flipper button to decrement the score and the right flipper button to increment the score. The Credit button can be used to load the factory setting for the displayed level and all those below it.

9) GAME PRICING

This step provides a choice of loading a standard setting for a particular country or a custom setting. When a standard setting is selected, the following steps (10-17) are skipped.

- 10) CHUTE 1 UNITS (L)
- 11) CHUTE 2 UNITS (R)
- 12) CHUTE 3 UNITS (C)
- 13) CHUTE 4 UNITS
- 14) UNITS REQUIRED FOR CREDIT
- 15) UNITS REQUIRED FOR BONUS
- 16) BONUS CREDITS
- 17) MINIMUM UNITS REQUIRED FOR CREDIT

Steps 10-17 are used if a custom setting is selected in step 9 (GAME PRICING). Steps 10-13 select the number of units that each chute is worth when a coin is dropped into that particular chute. The value entered for step 14 determines how many units must be accumulated for a credit to be issued on the game. Steps 15 and 16 determine how many units must be accumulated for any bonus credits to be issued. A value of zero entered for step 15 will disable the bonus feature. Step 17 indicates the number of units required before any credits are issued (see Coin Chute Setting Table for examples).

18) COIN METER

If set to ON, the pulses to be given for each of the four coin chutes can be defined so that the number of pulses for a given chute are in relation to the currency denomination. If set to OFF, steps 19-22 will be skipped.

- 19) CHUTE 1 PULSES
- 20) CHUTE 2 PULSES
- 21) CHUTE 3 PULSES
- 22) CHUTE 4 PULSES

The four steps above are used to set the number of pulses to be issued for each of the four coin chutes.

23) 1 COIN BUY-IN BONUS

At the end of a game a 10-second timer is initialized allowing each player that participated in the previous game a chance to purchase 1 credit for each coin inserted.

24) GAME PERCENT PAYOUT

This step is used to set the game payout percentage used when the Auto-Percentaging adjustment is on. The value entered for this step is compared to the value calculated by dividing total replays by total plays (see Bookkeeping section). Total

III. TEST MODE

37) ATTRACT MESSAGE

This step is used to enable or disable an operator message during the attract mode (game over). This step is also used to enter a user message into memory. To enter a message press the Credit button. The current message will be displayed and the cursor position will be indicated by the flashing character. If the current position is blank, a flashing directional arrow will appear. This type of arrow will indicate which direction the cursor will move if the Credit button is pressed. The Credit button is also used to select characters after they have been chosen using the left and right flipper buttons.

38) NOT USED

39) RIGHT BOOKKEEPING AUTO-RESET

If this step is set to on, all the short term bookkeeping steps (in brackets) will reset after 2000 plays. Otherwise they will not reset until 10,000 games have been played on the machine.

40) PLAYFIELD SPECIAL

When a playfield special is won, either a replay or an extra ball is awarded to the player based on the setting of this step.

ADJUSTMENTS

OPERATOR ADJUSTMENT SETTINGS
(*** = FACTORY DEFAULT SETTING)

41) GAME DIFFICULTY

THE ADJUSTMENTS LISTED IN THE TABLE BELOW ARE AUTOMATICALLY SET AS INDICATED IN THE TABLE UNLESS FINE-TUNE IS SELECTED USING THE RIGHT FLIPPER BUTTON. IF FINE-TUNE IS SELECTED, EACH STEP IN THE TABLE CAN BE ADJUSTED INDIVIDUALLY. OTHERWISE, THESE STEPS ARE SKIPPED.

STEP				(ENG.)	(FR.)		
		VERY EASY	EASY	***	***	VERY HARD	
41	GAME DIFFICULTY	VERY EASY	EASY	MEDIUM	HARD	VERY HARD	
42	ROUND TIMING	VERY EASY	EASY	MEDIUM	HARD	VERY HARD	
43	EXTRA BALL %	VERY EASY	EASY	MEDIUM	HARD	VERY HARD	
44	HORSESHOE 20M TIMEOUT	EASY	EASY	MEDIUM	HARD	HARD	
45	POOLBALL MANIA	EASY	EASY	MEDIUM	MEDIUM	HARD	
46	H.SHOE E.B. ROUND TIME	EASY	EASY	MEDIUM	HARD	HARD	
47	RACK ADVANCE E.B.	EASY	EASY	MEDIUM	MEDIUM	HARD	
48	CLEAN BANK SHOT	EASY	EASY	EASY	HARD	HARD	
49	HURRY-UP TIMING	EASY	EASY	MEDIUM	HARD	HARD	

III. TEST MODE

42) ROUND TIMING

VERY EASY = Slowest
EASY = Slow
MEDIUM = Average
HARD = Faster
VERY HARD = Fastest

43) EXTRA BALL PERCENTAGE

Controls how often an extra ball is awarded in bank shot (mystery). If actual extra ball percentage is less than the below setting, then bank shot (mystery) could award an extra ball.

VERY EASY = 50%
EASY = 40%
MEDIUM = 30%
HARD = 20%
VERY HARD = 10%

44) HORSESHOE 20M TIMEOUT

EASY = 7 SEC.
MEDIUM = 4 SEC.
HARD = 3 SEC.

45) POOLBALL MANIA

Bonus score received for hitting each appropriate target while in poolball mania.

EASY = 10,000,000
MEDIUM = 5,000,000
HARD = 3,000,000

46) HORSESHOE EXTRA BALL ROUND TIME

EASY = 18 SEC.
MEDIUM = 15 SEC.
HARD = 10 SEC.
very hard = 8 Sec.

See yellow sheet

47) RACK ADVANCE EXTRA BALL

When the hurry-up extra ball is lit for the lower right side target.

EASY = After racks 2 and 6
MEDIUM = After rack 4
HARD = Never for racks completed

48) CLEAN BANK SHOT

EASY = Award carries over from ball to ball.
HARD = Award resets every ball.

49) HURRY-UP TIMING

Time that any hurry-up feature is active.

EASY = 15 SEC.
MEDIUM = 10 SEC.
HARD = 7 SEC.

50) AUTO-SKILL

Various game features become more difficult as game recognizes a

player's increased skill level.

OFF = Disabled

*** ON = Enabled

51) REPLAY LEVEL BOOST

Automatically raises the replay score level if player has won a replay and his skill level is determined to be at a high enough level.

OFF = Disabled

*** ON = Enabled

52) VIDEO MODE

Determines the scoring for each caught ball.

*** EASY = Score 2,000,000 for 1st ball caught.
Score 5,000,000 for 2nd ball caught.
Score 10,000,000 for 3rd ball caught.
Score 20,000,000 for 4th ball caught.
HARD = Score 1,000,000 for 1st ball caught.
Score 2,000,000 for 2nd ball caught.
Score 5,000,000 for 3rd ball caught.
Score 10,000,000 for 4th ball caught.

53) CUE-BALL

*** IN = Cue-ball is in the game.
OUT = Cue-ball out of the game.

See yellow sheet

SOUND ADJUSTMENTS

The speaker(s) output is controlled by the volume control located on a circuit board just inside the front door of the game to the lower left.

Turning the volume control counter-clockwise will decrease the volume. Turning it clockwise will increase the volume.

POST ADJUSTMENTS

The post at the mouth of the left outlane and the post at the mouth of the right outlane can be positioned for conservative or liberal play. The smaller openings produce a more liberal game.

IV. BURN-IN

This function can be used to continuously exercise all the lamps and solenoids in the game.

III. TEST MODE

V. TOURNAMENT MODE

The Tournament Mode switch provides a simple way to alter some of the normal game settings in order to provide for tournament play. The switch is located on a circuit board just inside the front door of the game to the lower left. The game must be in a game over condition in order to recognize the switch changing states. When the switch is moved to the "ON" position with the front door open, four Tournament Mode adjustments will appear on the display. These adjustments can be altered by using the left flipper button to select the function and the right flipper button to alter the current setting. Once these settings have been chosen they will remain in permanent memory so that all that has to be done each subsequent time that tournament play is desired is to move the switch to the "ON" position. When the Tournament Mode settings are in effect they override the normal Game Adjustment settings. When the switch is moved to the "OFF" position, all the normal Game Adjustment settings are back in effect.

NOTE: Even if the game will not be used for tournament play, this switch can be used to provide an easy way to set the game for FREE PLAY without affecting any other game settings by setting the remaining three Tournament Mode adjustments to "NORMAL".

Each Tournament Mode adjustment is described below.

*** = Factory Default Setting

1) FREE PLAY

OFF = Credits are required to start a game.

*** ON = A game may be started without any credits posted.

2) GAME FEATURES

*** NORMAL = Normal play.

TOURNAMENT =

Various game features are altered as described below in order to provide the same odds for all players.

- a) AUTO-SKILL disabled
- b) D-O-U always lit in D-O-U-B-L-E sequence
- c) Bank shot (Mystery) always awards hurry-up 10,000,000

3) SPECIAL/REPLAY

*** NORMAL = Normal play.

POINTS =

Playfield Special awards 50,000,000 points. Match, High Game to Date, and Score Replay Level payouts are disabled.

4) EXTRA BALL

*** NORMAL = Normal play.

POINTS =

Extra Ball awards 20,000,000 points.

SERVICE SWITCH

This switch is actuated when the front door is closed. With the front door closed, all bookkeeping steps are incremented normally. When the front door is opened all bookkeeping steps are frozen at their current values. Any credits that are added with the front door open are recorded in the SERVICE CREDITS bookkeeping step.

FIGURE 1. INTERCONNECTION

OF OPERATION

ONNECTION DIAGRAM

IV. THEORY OF OPERATION

FIGURE 2. SYSTEM 3 BLOCK DIAGRAM

IV. THEORY OF OPERATION

A. CONTROL BOARD (A1)

The Control Board is supplied with 5vdc (A1P1) from the Power Supply (A2P2). The data contained in ram (U3) is kept valid when power is turned off by the lithium battery (BAT1) and controller (U6).

NOTE: When replacing either the battery, ram, or the controller there may be a message that appears in the display on power up the first time that indicates a low battery condition. If this occurs, turn the power off and back on again. The board should power up normally this time. If not, there is another problem on the board.

The Control Board can accommodate either a 27512 or a 27256 Eprom. JP1 must be installed for a 27512 or JP2 for a 27256 Game Prom. A 4 Mhz oscillator is configured using U17, R1, R2, C22, C23, and XTAL1. The oscillator output is then divided by 2 to a 2Mhz clock by U18 which is used as the input clock to the 65C02 (U1) microprocessor. The clock output of U1 (pin 39) is used as a sync signal for reading from or writing to the peripheral devices.

Two versatile interface adapters (U4, U5) are used to develop the necessary control signals for the system. The display connector (A1P3) is comprised of several signals. U4-15 and U4-17 are used as inputs to receive data from the Display Controller Board. Data is output to the Display Controller Board by U7 (BD0-BD7) and then latched by pulsing the DS0 line at U9-4. The output at DS1 (U9-5) is used to reset the Display Controller Board if it does not respond to data output by the Control Board.

The Driver Board connector (A1P2) contains all the signals necessary to operate the lamp and switch matrix strobes, the lamp matrix returns, and the solenoids. The lamp clear (LCLR), lamp strobe (LSTB), and lamp strobe data (LDATA) are generated by U4-12, U4-11, and U4-10 respectively. The appropriate lamp return data

during each active lamp strobe is output by U7 and latched into U5 on the Driver Board by the lamp return data strobe (LDS). The solenoid data is output by U7 (BD0-BD7) and latched into the appropriate Driver Board device (U1-U4) by the solenoid strobes (SS0-SS3).

The switch matrix returns are input at A1P5, buffered by U19 and U20 and then input to U4. Discrete inputs are provided at A1P5 for the slam, tilt, and test switches.

The connection to the Sound Board (A1P4) is made up of eight sound data lines (SD0-SD7), a return line (SRET), and a reset line (MR).

A reset circuit is configured using U13, U14, R3, and C24. When power is applied to the system, the microprocessor reset pin (U1-40) is held low for approximately 10 milliseconds. The system can also be reset by pressing the switch (SW1) on the board. Whenever a reset occurs the master reset signal (MR) (U18-9) is held low until the display strobe (DSTB) becomes active. At this point the master reset goes high which enables the peripheral IC's on the Display Board and Driver Board to accept data.

A watchdog circuit is employed to monitor both the display digit strobe and the lamp strobe. This circuit is made up of U11, U12, U13, U16, R5, R6, R29, R32, R33, C20, C21, C28, and C29. If either the display strobe (DSTB) or the lamp strobe (LSTB) is missing for 330 milliseconds the system will be reset. The system will also be reset if the supply voltage drops below 4vdc. This voltage monitor is configured using U21, VR1, D1, D2, R34, and R35.

B. POWER SUPPLY (A2)

The transformer panel delivers 12vdc to the input of the power supply. The regulated output voltage should be set to 5vdc by using potentiometer R3. This voltage is then supplied to the Control Board (A1), Driver Board (A3), Display Board (A4), Sound Board

IV. THEORY OF OPERATION

(A6), Display Controller Board (A8), and any other auxillary board which may require it.

C. DRIVER BOARD (A3)

Two voltages are supplied to this board at A3P1. The 5vdc is supplied from the Power Supply (A2) and the 20vdc is supplied from the transformer panel. The 20vdc is used to source the controlled lamps and the switch matrix. The Driver Board receives its data at A3P2 from the Control Board (A1P2). Solenoid data is latched into U1-U4. Lamp return data is latched into U5. Lamp and switch strobe data is shifted through U6 and U7. The comparators (U10,U11) are used to protect the MOSFETS (Q33-Q49). If a sensed input voltage exceeds the reference voltage (Vref), the corresponding MOSFET is turned off immediately following the lamp clear pulse (LCLR) supplied by U12 thus limiting the duty cycle. If the master reset signal (MR) is held low all lamps and solenoids will be disabled.

D. DISPLAY CONTROLLER (A8)

This board is comprised of the power supply section and the digital section. The power supply is used to generate the necessary voltages that are required to power the Display Board. All voltages are input at A8P1 and then output to the Display Board at A8P2.

The digital section controls the information which appears in the display and also the refresh of the display information. The clock circuit runs at 3.579 MHz and is divided by two through U5 and then fed to the microprocessor (U1-37) as the master clock. The LED on the board will flash if the microprocessor (U1) is running properly. A controller chip (U2) is used to refresh the Display Board independent from the code which is being executed by the microprocessor (U1). U1 uses the data bus during the phase 2 portion of the clock while U2 uses it during the phase 1 portion. The address lines from both U1 and U2 are multiplexed through U9-U11 to determine which device has control of

the ram (U4). The necessary data is then output to the Display Board at A8P4. Data is both transmitted and received from the Control Board at A8P3. If the Control Board cannot successfully communicate with the Display Controller Board it will attempt to reset the Controller Board by sending a negative going signal on A8P3-14 (DS1).

E. DISPLAY BOARD (A4)

The Display Board consists of a 128 column X 32 row gas plasma display. The drive electronics located on the backside of the board convert low voltage serial data in to high voltage parallel data out for driving the display. The column drivers contain output latches so that column data for the following row can be entered while the present row is being displayed. All voltages required by the display are input at A4P1. All control signals needed to multiplex the display are input at A4P2. The Display Controller Board sends 128 bits of serial column data on the SDATA line for every row of display information. The data is shifted through the driver IC's by the dot clock signal (DCLK). The column data for a particular row is then latched by the column latch (CLATCH) signal. The row clock (RCLK) signal is used to clock the row driver data (RDATA) through the row driver IC. There is only one active row at a time. Between rows the display enable (DE) signal is used to prevent the display from flickering.

F. SOUND BOARD (A6)

The Sound Board consists of two 6502 microprocessor systems, a dual DAC, an input port to receive commands from the system Control Board, and a low level audio output at A6P2-9 which is sent to the summing amplifier located on the Auxiliary Sound Board (A20) for amplification.

The Sound Board requires three supply voltages +5vdc, +12vdc, and -12vdc. In addition, a power-up reset signal is required from the Control Board. If a manual reset is desired, pressing SW2 will reset both processors.

IV. THEORY OF OPERATION

A 4MHz oscillator is configured with R11, R12, C14, C15, C22, XTAL1, and T1. This clock is then divided down by S1 into either a 2MHz or 1MHz clock signal for the processors N1 and T3. A 250 KHz clock signal from S1-11 is used by the programmable timer section consisting of N5, H5, T5, and K5.

Eight lines from the Control Board are input at A6P1 on the Sound Board and sent to the two input code latches A3 and B2. When any of these inputs goes low (except for A6P1-9 when JP7 is not installed) A2-8 goes high which causes the input code data to be latched into A3 and B2. Also at the same time the flip-flops contained in A4 are clocked which cause the IRQ input of each microprocessor to go low. The outputs of A4 will remain in the low state until each flip-flop is cleared by a signal from its associated microprocessor after each IRQ is processed.

The Sound Board is designed to accomodate different types of Eproms. Jumpers JP1, JP2, JP3, and JP4 should be set to their proper positions based on the density of the Eproms being used.

G. AUXILIARY SOUND BOARD (A20)

The Auxiliary Sound Board contains a sound generator YM2151 (U9) and a sound/speech generator MSM6295 (U1). Both of these IC's operate under the control of the T3 microprocessor on the master Sound Board (A6). The sound generator YM2151 responds to its commands by sending serial data to the YM3014 DAC (U10). The DAC then converts this data into an analog signal which is filtered through a series of op-amps and then sent to the main summing amplifier (U11).

A 74HCT74 IC (U6) is used to divide the 4 MHz clock signal present at A20P4-9 into both a 1 MHz and 2 MHz signal which is selectable via JP3 (2 MHz) or JP4 (1 MHz). This signal is then used as the master clock for the speech generator (U1). When the speech generator (U1) receives a command, it then retrieves its data from the Eproms (U4, U5). The analog output at pin 36 (DA0) is then sent

through an active filter network and then to the main summing amplifier (U11).

The output of the main summing amplifier (U11-7) is input to a voltage controlled amplifier (VCA) (U13). The volume is controlled by a potentiometer located just inside the front door of the game. The potentiometer acts as a resistor divider which supplies a 0 to 5 volt signal to the VCA at U13-2. The output of the VCA is then sent to Auxiliary Power Supply (A5) for amplification.

H. SENSOR BOARD (A15)

This board is used to detect if any flipper is energized and then inputs the data to the Control Board to be processed. This board therefore eliminates the need for a second switch to be used on the flipper assembly itself. U1 is an optocoupler device which converts the input signal from the flipper circuit when energized to a signal which can be recognized by the Control Board as a valid switch closure.

I. OPTICAL INTERFACE (A25)

The optical interface assembly generates and receives the infrared light pulses needed to optically detect the ball breaking an infrared light beam. It also provides a visual indication that the interface assembly is functioning properly.

This method of detection transmits infrared light pulses from an opto LED to an opto phototransistor receiver. The LED light pulses are generated from a switch strobe that is buffered and current amplified by two sections of the LM339 voltage comparitor (output pins 1 & 2) and transistor Q2.

When no ball is present, the light pulses reach the opto receiver which passes the pulses 180 degrees out of phase with the switch strobe on to two additional sections of the comparitor (pins 9 & 10). Because the strobe pulses and receive pulses are out of phase, they cancel at resistors R1 & R3 and keep comparitor

IV. THEORY OF OPERATION

output pin 13 high therefore preventing Q1 from passing strobes on to the switch return line.

As a ball passes between the opto transmitter and receiver, the light beam is broken. Now, with no out of phase pulses coming from the receiver, the strobe appears at comparator inputs 9 & 10. Comparator output pin 13 begins pulsing low and passes the strobes through Q1 to the return line to signal a closed switch. Also positive strobe pulses at output pin 14 of the comparator turn Q3 on and light LED D2. D2 lit indicates a broken light beam and a closed optical switch.

J. SMART SWITCH™ (Piezo Film Sensor)

These devices take the place of the the normal contact point type switches used for rollovers and spot targets.

These switches do not require any adjustment. DO NOT ATTEMPT TO ADJUST THE WIDE CANTILEVER BEAM. This could cause permanent damage to the device. The lifetime of these switches has been determined to be over 10 million cycles. The main advantage of these switches is the fact that they cannot be contaminated by such elements as moisture, dust, or smoke. Each switch assembly consists of a wide cantilever beam which has a piezo film sensor element laminated to its surface. When this beam is deflected, it induces a strain on the laminated piezo film sensor element. As the beam is returning to its rest position it generates an output voltage which triggers the on board circuit. This circuit then generates a momentary output which resembles that of contact points being closed.

GOITLBERG®

V. GENERAL INFORMATION

A. PRINTED CIRCUIT BOARDS ARE DESIGNATED AS FOLLOWS:

A1 - Control Board
A2 - Power Supply
A3 - Driver Board
A4 - Dot Matrix Display
A5 - Auxiliary Power Supply
A6 - Sound Board
A8 - Display Controller
A11 - Auxiliary Driver Board
A13 - Resistor Board
A15 - Sensor Board
A16 - Filter Board
A17 - Diode Board
A20 - Auxiliary Sound Board
A22 - LED Board
A25 - Optical Interface Board
A26 - Game Control Board

B. WIRE COLORS ARE SHOWN AS NUMBERS:

0 Black
1 Brown
2 Red
3 Orange
4 Yellow
5 Green
6 Blue
7 Violet
8 Gray
9 White

For example, 688 is a BLUE-GRAY-GRAY striped wire.

Printed circuit board connectors will be labeled AX-JX. For example, A3-J4 is the connector J4 to the driver board (A3).

SOUND BOARD (A6) PARTS LIST

REFERENCE	DESCRIPTION	PART NUMBER	REFERENCE	DESCRIPTION	PART NUMBER
	Sound Board Assembly (1A6)	MA-1629	R20,R34	Resistor, 4.7K Ohm, 5%, 1/4W	XO-7
C13,C37	Capacitor, 1UF, 20%, 50V (Non-polar)	XO-746	R61-R64	Resistor, 33K Ohm, 5%, 1/4W	XO-43
C8,C9,C10,	Capacitor, 10UF, 20%, 25V (Tantalum)	XO-127	R59,R60	Resistor, 100K Ohm, 5%, 1/4W	XO-45
C18,C19,			R65	Resistor, 27K Ohm, 5%, 1/4W	XO-11
C33,C34			A2	IC, 7430, 8 Input NAND Gate	XO-643
AND THREE			A3,B2,S5	IC, 74LS374, Octal "D" Flip Flop	XO-96
UNMARKED			A4	IC, 74LS74, Dual "D" Flip Flop	XO-434
CAPACITORS			A5, B1	IC, MC3403P, Quad Op-Amp	XO-953
C11,C12	Capacitor, 10PF, +80%-20%, 50V	XO-635	E2	IC, AD7528J, Multiplier DAC	XO-647
C14,C22	Capacitor, 33PF, 10%, 100V	XO-896	G3	IC, 74LS377, Octal "D" Flip Flop	XO-97
C15	Capacitor, .047UF, 20%, 50V	XO-638	G4,T1	IC, 74LS04, Hex Inverter	XO-418
C21	Capacitor, 22PF, 10%, 50V	XO-633	G5	IC, 74HC08, Quad 2 Input "AND" Gate	XO-872
C28 AND	Capacitor, 0.1UF, +80%-20%, 50V	XO-230	H2,H3	IC, 6116LP-15, 2K X 8 RAM	XO-928
FIFTEEN			H5,K5,N5	IC, 74LS161, Synchronous Presettable	XO-440
UNMARKED			S1,T5	Binary Counter	
CAPACITORS			K2,K3	IC, Specified Per Game	
C31,C32	Capacitor, 0.1UF, 10%, 100V	XO-784	M2	IC, 74LS245, Octal Bus Transceiver	XO-79
C35	Capacitor, 1000PF, 10%, 100V	XO-296	N1,T3	IC, 65C02P2 or 6502A, CPU	XO-927 or
C36	Capacitor, 2200PF, 10%, 100V	XO-289	S2	IC, 74LS139, Dual 1 of 4 Decoder	XO-419
C38	Capacitor, .0033UF, 10%, 100V	XO-600	S3	IC, 74HCT245, Octal Bus Transceiver	XO-891
C39	Capacitor, 220PF, 10%, 100V	XO-694	T4	IC, 74F138, 1 of 8 Decoder	XO-1041
D1	Diode, MV5752, (LED, Red)	XO-270	SIP 1	Resistor Pack 1K Ohm X 8	XO-493
R5,R9,R10,	Resistor, 1K Ohm, 5%, 1/4W	XO-5	SW2	Switch, Pushbutton	XO-897
R27,R28,R31,			XTAL 1	Crystal, 4 MHz	XO-366
R33,R35			A6P1,A6P2	Connector (2)	XO-879
R6	Resistor, 240 Ohm, 5%, 1/4W	XO-173		28 Pin Dip Socket (2)	XO-536
R11,R12	Resistor, 470 Ohm, 5%, 1/4W	XO-35		Jumper, Resistor, 0 OHM (7)	XO-469
R21, R25	Resistor, 3K Ohm, 5%, 1/4W	XO-23		20 Pin Dip Socket	XO-491
R16,R17	Resistor, 10K Ohm, 5%, 1/4W	XO-18			
R18	Resistor, 6.8K Ohm, 5%, 1/4W	XO-8

VII. PARTS INFORMATION

FLIPPER PARTS

REPAIR NOTE:
BEFORE INSERTING ITEM 1,
PLACE ONE DROP OF SAF-T-LOK
T70 THREAD LOCKING COMPOUND
INTO THE THREADED HOLE OF ITEM 4.

NOTE:
ITEMS 1 THRU 4 ARE NOT PART
OF THE FLIPPER ASSEMBLY.

ITEM	DESCRIPTION	PART NO.
1	FLIPPER ASSEMBLY, LEFT SIDE (ILLUSTRATED)	MA-1790C
2	FLIPPER ASSEMBLY, RIGHT SIDE	MA-1791
3	8-32 X 1/2" OVAL HEAD MS	FA-77
4	FLAT RUBBER RING, RED OR BLACK	13151 OR 25972Y
5	FLIPPER SHAFT ASSEMBLY	26457
6	10-32 X 3/8" UNBRAKO (3)	FA-90

SEE V. GENERAL INFORMATION, FOR
PLAYBOARD COILS/COLORS/SLEEVES CHART.

VII. PARTS INFORMATION

POP BUMPER PARTS

PAT. NO. 213,981

ITEM	DESCRIPTION	PART NO.
1	Pop Bumper Assembly	Specify Game
2	Pop Bumper Cap (Specify Color)	10434
3	Lamp, #44	LA-0
4	Socket	PS-0
5	Tie Rods and Ring	16634
6	Pop Bumper Skirt (Specify Color)	10433
7	Switch Assembly	Specify Game
8	Slotted Yoke	12149
9	Plunger	2663
10	Insulating Yoke	2662
11	Elastic Stop Nut, 6-32	FA-660
12	Kicker Return Spring	21643
13	Stop Bracket	8571
14	Coil	Specify Game
15	Coil Sleeve	5064
16	Coil Mounting Bracket and Stop	17906
17	8-32 x 1/4 HHMS SEMS	FA-64
18	6-32 x 1/4 HHMS SEMS	FA-53
19	Pop Bumper Pad	16632
20	Pop Bumper Trim Platter	25732
21	Pop Bumper Base	10432
22	Pop Bumper Spring	10430
23	6-32 x 1-1/8 Oval HMS	FA-43
24	Pop Bumper Body (Specify Color)	10435
25	Bracket	16647
26	4-40 x 1/2 Pan Head Phillips	FA-108
27	Pop Bumper Cap, Clear, (Specify Color)	26635
	Pop Bumper Body (Specify Color)	26860

NOTE:

ITEMS 23 AND 27 ARE INTERCHANGEABLE.

BASIC TROUBLESHOOTING GUIDE

CONDITION	POSSIBLE CAUSE
Game does not power up	* Line fuse (F1) blown * Primary fuse (F2) blown
Game does not power up but general illumination lamps light	* Power supply fuse (F5) blown
SWITCH SHORT message appears in display on power up	* Check for a voltage >0v shorted to switch return number shown in display * Bad Control Board (A1) * Bad Driver Board (A3)
Lightbox illumination lamps do not light	* Fuse (F8) blown
Playfield illumination lamps do not light	* Fuse (F9) blown
All controlled lamps, flash lamps, relays, and switches not working	* Fuse (F6) blown * Bad Driver Board (A3)
All controlled lamps work but some switches do not work	* Bad diode associated with the switch (contact point type switch only)
Some controlled lamps and some switches do not work	* Short circuit on associated strobe line on playfield * Bad Driver Board (A3)
Display not working (blank) but LED on Dot Matrix Controller Board (A8) is flashing	* Display fuse (F3) or (F4) blown * Bad Dot Matrix Display Board (A4) * Bad Display Controller Board (A8)
Display not working and LED on Control Board is flickering rapidly	* Bad Dot Matrix Controller Board (A8) * Bad Control Board (A1)
Display not working and LED on Dot Matrix Controller Board (A8) is glowing bright to dim	* Bad Dot Matrix Controller Board (A8)
A solenoid operated device does not work. (Pop Bumper, Kicker, etc.)	* Associated fuse on playfield is blown * Bad Driver Board (A3)
All flippers and solenoids do not work	* Solenoid fuse (F7) blown
A flipper coil overheats and burns	* End of stroke switch on flipper unit not opening when the flipper button is held in. * Shorted capacitor on flipper unit
Flipper chatters when flipper button is held in	* Open hold winding (small diameter wire) on flipper coil
No sound or speech	* Bad Auxiliary Power Supply fuse (F10 or F11) * Bad Auxiliary Power Supply Board (A5) * Bad Auxiliary Sound Board (A20) * Bad Sound Board (A6)
Some sounds or speech missing	* Bad Auxiliary Sound Board (A20) * Bad Sound Board (A6)
An optical switch does not work or works intermittently	* Misalignment of LED transmitter to receiver * Bad LED transmitter and/or receiver * Bad Optical Interface Board (A25)

IMPORTANT NOTICE

THIS SHIPMENT HAS BEEN CAREFULLY INSPECTED AND
PROPERLY PACKED BEFORE LEAVING THE FACTORY.

WE CANNOT ASSUME RESPONSIBILITY FOR BREAKAGE
THAT MAY OCCUR IN TRANSPORTATION. IF THIS SHIPMENT IS
DAMAGED IN ANY WAY, IMMEDIATELY NOTIFY THE CARRIER AND
FILE DAMAGE REPORT SO THAT A SATISFACTORY ADJUSTMENT
CAN BE MADE BY THEM.
